Pakistan

ABOUT ME

Detail-oriented Computer Science student with practical experience building responsive, scalable web applications and management systems. Proficient in modern full-stack development technologies, including React, Next.js, NestJS, TypeScript, and Java. Passionate about leveraging data structures and robust backend logic to solve real-world problems within a collaborative engineering team.

EDUCATION

SZABIST UNIVERSITY, KARACHI
Bachelor of Computer Science (BSCS) | GPA: 3.5 / 4.0

2022 – June 2026

TCF COLLEGE, KARACHI
Intermediate | Score: 74%

2019 – 2021

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C, JavaScript (ES6+)
- **Web Development:** HTML5, CSS3, React, Next.js, NestJS, Node.js, Laravel, Bootstrap
- **Databases & Tools:** MySQL, Networking Concepts
- **AI & Productivity Tools:** AI-Assisted Development (GitHub Copilot/ChatGPT), Git/GitHub

EXPERIENCE/PROJECTS

StockMento (Financial Education & Trading Simulator) | Next.js, React, TypeScript, NestJS, PostgreSQL

- Developed a comprehensive web-based platform integrating a Learning Management System (LMS) and a Pakistan Stock Exchange (PSX) trading simulator to facilitate practical investment experience.
- Implemented secure user authentication, interactive technical analysis labs, and an advanced order execution system featuring real-time market data, limit orders, and stop-loss functionality.
- Designed a scalable backend architecture utilizing a relational PostgreSQL database and Redis caching to handle persistent storage for user profiles, virtual wallets, portfolio analytics, and a performance leaderboard.

E-Commerce Platform | HTML, CSS, Bootstrap, PHP, Laravel, MySQL

- Developed a fully functional, responsive e-commerce application featuring seamless desktop and mobile compatibility.
- Implemented secure user authentication modules, product management pipelines, and customer registration systems.
- Designed and integrated a relational MySQL database to handle persistent storage for user profiles and order tracking.

Exam Management System | Java, Object-Oriented Programming (OOP)

- Designed an administrative software solution enabling educators to seamlessly schedule exams and track student performance data.
- Architected the system using strict OOP principles to ensure code reusability, modularity, and clean system logic.
- Created an intuitive dual-interface dashboard tailored specifically for separate administrator and student workflows.

Car Showroom Management System | Java, Data Structures & Algorithms (DSA)

- Engineered a desktop application utilizing custom Linked List data structures to dynamically manage and optimize vehicle inventory.
- Integrated reliable file handling mechanics to ensure seamless data persistence across application sessions.
- Programmed core algorithms for automated bill calculation, promotional discount applications, and service cost management.
